

## **NEW Church Organ DEDICATION (IN June, 2022):**

The organ was completed last spring! Peter Walker and his assistant April Corey get credit for the organ installation.

The chamber which housed the old organ's pipes is now a closet. The choir loft area has been restored to what we believe was the original size, with hardwood flooring. The upstairs classroom and closet has been made a bit smaller with the new organ's pipe chamber. The pipes are now in the center of the back wall of the sanctuary, projecting their beautiful music into the nave. The screen built by Albert Urie, which used to be in the front of the church, has been modified to fit the new chamber at the back of the sanctuary. Here are some pictures of the organ a-building, with pictures of the finished product at the end:

A new closet where the old organ pipes used to be! The choir loft extension has been taken off, restoring the space to the original.

The chancel area. The flooring in the choir area is now hardwood.

Here's the view of the chancel and the front of the nave from the space where the new organ pipes are now installed.

The new floor for the choir loft! The closet door is taken from the upstairs classroom closet. It matches pretty well!
